SUMMARY

Backend engineer with 8 years in fintech and payments infrastructure. Redesigned a core ledger service to handle 10x traffic growth and reduced settlement pipeline P99 latency from 800ms to under 120ms. Seeking a Staff or Senior Backend role where distributed systems depth is the job, not a side concern.

EXPERIENCE

Senior Backend Engineer

FinFlow GmbH

*Jan 2020 – Present
Hamburg, Germany*

- Redesigned the core ledger service to handle 10x traffic growth with no additional infrastructure, replacing a synchronous write path with an event-sourced model backed by Kafka.
- Reduced settlement pipeline P99 latency from 800ms to under 120ms by profiling the hot path, eliminating redundant DB round-trips, and introducing read replicas for non-critical queries.
- Led migration of 6 services out of a monolith over 18 months, coordinating 4 engineers and maintaining zero downtime throughout.
- Introduced OpenTelemetry-based distributed tracing across the payment stack; reduced mean time to diagnose production incidents from hours to under 15 minutes.

Backend Engineer

ClearPay Technologies

*Mar 2018 – Dec 2019
Hamburg, Germany*

- Owned the reconciliation service processing nightly settlement files from 12 banking partners; rewrote the parser in Go, halving processing time.
- Built an idempotency layer for the external payment API that eliminated duplicate charges during network retry storms.
- Migrated the team's deployment pipeline from manual scripts to Kubernetes-based CD; reduced deployment time from 45 minutes to under 5.

Junior Backend Developer

Nordcloud AG

*Sep 2016 – Feb 2018
Hamburg, Germany*

- Maintained and extended a Java-based billing system for a managed cloud services provider.
- Wrote the first automated integration test suite for the billing API; covered 80% of the critical payment paths within 3 months.
- Participated in on-call rotation; documented 15 recurring incident types and built runbooks that reduced escalations.

EDUCATION

BSc Computer Science

University of Hamburg

*Hamburg, Germany
Oct 2012 – Sep 2016*

- Thesis: Optimising lock contention in concurrent key-value stores.

SKILLS

Languages: Go, Rust, Python, Java, SQL

Infrastructure: Kafka, PostgreSQL, Kubernetes, Redis, gRPC

Observability: OpenTelemetry, Prometheus, Grafana, Jaeger

Certifications: Certified Kubernetes Administrator (CNAF), AWS Solutions Architect

LANGUAGES

English — C2 Level (Native)

German — B1 Level (Conversational)
